UNITARIZATION OF THE RADON TRANSFORM ON HOMOGENEOUS TREES

MATTEO MONTI

Abstract: Let X be a q-homogeneous tree and Ξ be the set of horocycles. The classical definition of horocyclic Radon transform \mathcal{R} maps $C_C(X)$ into the space $L^2(\Xi)^{\flat}$ of the square integrable functions on Ξ whose average on the boundary is even. We exhibit the existence of a pseudo-differential operator Λ such that $\Lambda \mathcal{R}$ extends to a unitary operator \mathcal{Q} from $L^2(X)$ onto $L^2(\Xi)^{\flat}$. Then \mathcal{Q} intertwines the quasi-regular representations of Aut(X) on $L^2(\Xi)^{\flat}$.
